39 pages including 35 annexes which form an integral
part of this assessment

EAD 330046-01-0602

ETA-11/0191 issued on 6 May 2021

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific part

1 Technical description of the product

The fastening screws are self-tapping screws made of carbon steel with anticorrosion coating (listed in Annex 1).

The components and the system setup of the product are given in Annex (1-34).

2 Specification of the intended use in accordance with the applicable European Assessment Document 330046-01-0602

The fastening screws are intended to be used for fastening metal sheeting to metal substructures. The sheeting can either be used as wall or roof cladding or as load bearing wall and roof element. The fastening screws can also be used for the fastening of any other thin gauge metal members. The intended use comprises fastening screws and connections for indoor applications. Furthermore the intended use comprises connections with predominantly static loads (e.g. wind loads, dead loads). The fastening screws are not intended for re-use.

The performances given in Section 3 are only valid if the fastening screws are used in compliance with the specifications and conditions given in Annex (1-35).

The verification and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastening screws of at least 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the manufacturer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Shear Resistance of the Connection	see Annexes to this ETA
Tension Resistance of the Connection	see Annexes to this ETA
Design Resistance in combination of tension and shear forces (interaction)	see Annexes to this ETA
Check of Deformation Capacity in case of constraining forces due to temperature	No performance assessed
Durability	No performance assessed

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Performance Class A1 in accordance with EC decision 96/603/EC (as amended)

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD 330046-01-0602, the applicable European legal act is: Commission Decision 1998/214/EC, amended by 2001/596/EC.

The system to be applied is: 2+

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 1 June 2022 by the Deutsches Institut für Bautechnik

Fasteners for connecting steel components

Variations of nonut®

Annex 1

English translation prepared by DIBt

Designations and abbreviations used in the Annexes

Materials and dimensions

Relevant materials and dimensions specified in the nonut® annexes:

Screw	Material of the nonut®
Component I	Material of component I (component adjacent to the screw head)
Component II	Material of component II (substructure)
t_I	Thickness of component I
t_{II}	Thickness of component II
d_{dp}	Pre-drill diameter of component I and component II
$d_{dp,I}$	Pre-drill diameter of component I
$d_{dp,II}$	Pre-drill diameter of component II
CL	Load bearing thread area of the nonut® that can be used for design (CL see annex 1)

Thickness t_{II} corresponds to the load-bearing screw-in length of the nonut® in component II, if the load-bearing screw-in length does not cover the entire thickness of component II. The area CL of the nonut® is load-bearing (CL see annex 1).

Performances

The relevant performances for design are given in the annexes:

$N_{R,k}$	Characteristic value of longitudinal tensile strength
$V_{R,k}$	Characteristic value of the transverse tensile strength

Edge and center distances

The following minimum edge and center distances apply

$$\begin{aligned}
 p_1 &\geq 50,0 \text{ mm} \\
 e_1 &\geq 25,0 \text{ mm} \\
 p_2 &\geq 50,0 \text{ mm} \\
 e_2 &\geq 25,0 \text{ mm} \\
 d_{pd} &\text{ see Annexes}
 \end{aligned}$$

Fasteners for connecting steel components

Designations, abbreviations and edge distances

Annex 2

Determination of Design Values

The design value of tension and shear resistance has to be determined as follows:

$$N_{R,d} = \frac{N_{R,k}}{\gamma_M} \qquad V_{R,d} = \frac{V_{R,k}}{\gamma_M}$$

The characteristic values $N_{R,k}$ and $V_{R,k}$ are given in the Annexes. For intermediate dimension of metal member or sheeting or substructure the characteristic value may be determined by linear interpolation.

The recommended partial safety factor $\gamma_M = 1,33$ is used, if no partial safety factor is given in national regulations or national Annexes to Eurocode 3.

For asymmetric metal substructures with thickness $t_{II} < 5$ mm (for instance Z- or C-shaped profiles), the characteristic value $N_{R,k}$ given in the Annexes has to be reduced to 70%.

In case of combined tension and shear forces the following interaction equation is taken into account:

$$\frac{N_{S,d}}{N_{R,d}} + \frac{V_{S,d}}{V_{R,d}} \leq 1,0$$

$N_{S,d}$ and $V_{S,d}$ indicate the design values of applied tension and shear forces.

Installation conditions

The installation is carried out according to the manufacturer's instructions.

The nonut® are fixed rectangular to the surface of the metal member or sheeting.

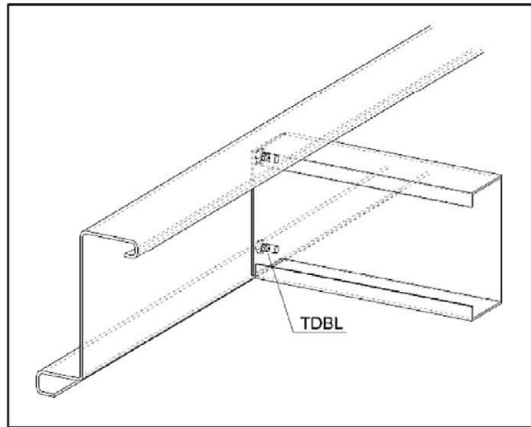

The metal member or sheeting and substructure are in contact to each other.

The nonut® may be used in the deep-freeze areas up to a temperature of -35 degrees Celsius.
